

Riding Our Way To A Cleaner Future, **Stop Dirty Diesel!**

We, the undersigned, care about the health of students and the air quality of our communities. Diesel exhaust contains 40 toxic chemicals, which **increase the risk of asthma, heart and lung disease** in children, youth, and adults. Additionally, federal regulators estimate that diesel is **responsible for 125,000 cases of cancer** nationwide.

We request the following actions be taken to protect the environment and health in our schools:

- a) **Eliminate school bus idling** and design school bus parking to minimize health effects on students;
- b) **Increase inspection and maintenance** of school buses to reduce diesel exhaust;
- c) Over the long term, **change to cleaner fuels and technologies** to reduce harmful emissions;
- d) **Provide notices to parents** of the health risks of diesel exhaust and what is being done to protect students.
